

FOR IMMEDIATE RELEASE

CN established a partnership with ProctorEdu to conduct credible online exams on the CN Learning Management System.

By using online exam proctoring tools, institutions are able to establish credibility of the assessment results. Through the integration between CN Quizzes tool and ProctorEdu, faculty and schools can now monitor students' exam taking behaviors smoothly. This integration brings together the strengths of both platforms and opens up new opportunities.

Indianapolis, IN, Oct 3, 2022 – [ProctorEdu](https://www.proctorio.com/) and [CourseNetworking](https://www.coursenetworking.com/), two established and global educational technology companies, are both excited to announce their partnership that allows integration of the new-generation online exam proctoring tool within CN LMS, for both Classic and Pathway courses. ProctorEdu is a browser solution for online monitoring, recording, and evaluating user behavior throughout online assessments. The company has been providing online proctoring services since 2016 and their mission is to make education more accessible to the students from all over the world.

In the last 7 years, ProctorEdu has become a top notch learning technology provider. Here are some of the features their product offers:

- Credibility score - an automatic AI-powered assessment of confidence in test results makes tracking exams a human invigilator unnecessary.
- Biometric verification of identity makes sure the same person has started and ended a test and tracks all the interventions by possible helpers. The system also makes sure that the person in the ID document (ie. passport) and the person in front of the camera is the same person.
- Physiological voice detection detects any whispers and any suspicious noise.
- An option to have 3 video streams of a student: (1) a video from the student's webcam, (2) their screencast and (3) the additional mobile camera in case you also need a video of, for example, the student's desk to see that there was no any banned tools on it while taking the test.
- A second monitor detection.
- Mobile support - students can take tests with proctoring on Android and iOS mobile devices.
- A fully web-based solution, there is no need for test-takers and other users to download anything. And there are very mild technical requirements for using the proctoring tool (i.e. internet speed of 256 Kbit/s).
- Can be integrated with any LMS or testing platform.
- For live proctoring - Proctors can communicate with each student via audio, video and text in real time.
- Customizable features to create test scenario based on client needs.

“There are many more features available and we keep evolving, but one thing stays the same - we always focus on user-experience. We release minor updates every quarter to give our clients the most intuitive interface. Major updates are released every year to provide the best of what technology has to offer,” said Artem Kozin, CEO aka Chief Academic Integrity Evangelist Officer of ProctorEdu.

Currently, ProctorEdu has been fully tested on CN and the integration is ready for interested institutions to deploy on the condition that they have licensed both products. If your institution is interested in using this proctoring tool on the CN platform, please contact us at info@coursenetworking.com.

CN is looking forward to partnerships with more eLearning platforms and institutions. If your organization is interested in partnering with CN, please reach out to us.
